

# AIESEC Code-Up! Part I - UX and UI Design

## Session 4 - February 04, 2022 - Individual Assignment

### Instructions

Components are an essential part of managing design elements and assets in your workspace, and they are crucial for maintaining design consistency.

Practice creating components by referring to the website example on the left - an online independent-goods e-commerce platform, Etsy.

Create a **library of components** that are used on this example webpage - you DO NOT need to build the webpage itself, **only the components** (e.g. buttons, tabs, navigation bars, links, cards, etc.)

The resources and elements have been given to you in this file, along with hints below for what kinds of components you might need to create.

You are also encouraged to go on the actual website and browse through the different buttons, tabs, navigation bars, etc. to observe their behaviour.

**DUPLICATE** this file to your own drafts and create your work there - **DO NOT** edit this file, as it is being shared by the whole class

Name your file as **“Session 4\_Individual Assignment\_[full name]”**

### Example of a component library

Terminology for different components: <https://careerfoundry.com/en/blog/ux-design/ux-design-glossary/>
